

Email Discovering

- There is a website called "hunter" in which we type a company's name, and it gives us all possible emails:

The screenshot shows a Firefox browser window with the Hunter (Email Hunter) website loaded. The URL is https://hunter.io/. The page has a header with the Hunter logo, a 'Product' dropdown, and 'Pricing' buttons. Below the header is a main section with the heading 'Connect with anyone.' and a subtext: 'Hunter lets you find email addresses in seconds and connect with the people that matter for your business.' A search input field contains 'company.com' and a red 'Find email addresses' button. Below the input field is a placeholder text: 'Enter a domain name to launch the search. For example, hunter.io.' At the bottom of the main section, it says 'Hunter is used by 2,000,000+ professionals and chosen by leading companies.' Logos for Google, IBM, Manpower, Microsoft, Adobe, and Invision are displayed. A progress bar at the bottom left shows '00:01:33' and a play button. On the right, there's an 'OpenDir' watermark.

The screenshot shows the same Firefox browser window after a search for 'tcm-sec.com'. The search input field now contains 'tcm-sec.com'. Below the input field, the text '1 email address' is displayed, followed by an email address 't2o@tcm-sec.com' and a green circular icon. To the right, it says '5 sources'. Below the email address, there's a sign-up message: 'Sign up to uncover the email addresses, get the full results, search filters, CSV downloads and more. Get 50 free searches/month.' and a 'Create a free account' link. The rest of the page is identical to the first screenshot, including the 'Hunter is used by 2,000,000+ professionals' section and the footer logos. A progress bar at the bottom left shows '00:01:59' and a play button. On the right, there's an 'OpenDir' watermark.

- It also gives us hints about the email structure of a company that has a domain...
- For example, here in tesla, it gives us an idea, that any employee in Tesla, his email is (firstName)(LastName)@tesla.com

Enable desktop notifications for Gmail. OK No thanks

OpenDir.cloud

- It also searches for people within a company:

The screenshot shows a Gmail inbox with a single email from Google titled "Security alert". The message content is: "Clearbit Connect was granted access to your Google Account pleasedonthackmesirplz@gmail.com if you did not grant access...". The timestamp is 2:32 AM. On the right side, there is a sidebar titled "Find a person" with a search bar. Below it, a list of contacts is displayed with their names, roles, and seniority. The contacts listed are: Bryan Yeung (Senior Manager, Sales, Marketing Systems), Prasath Ramakrishnan (Director, Data, Analytics), Elon Musk (CEO), Chris Griffith (Senior Manager, Product Management), Pradeep Bosco (Senior Software Engineer), Joshua Hodgson (Group Manager, Connected Car, Infotainment Partnerships), Alexander Dreyer Johnsen, Sophie Van Noppen (EA, Office of CTO, Co-founder), and Shweta Mehta (Staff Data Analyst). A notification at the bottom left says "Enable desktop notifications for Gmail. OK No thanks".

- Next up, we have "emailHippo":

The screenshot shows a Firefox browser window with the URL <https://tools.verifyemailaddress.io/>. The page title is "Email Address Verifier - Validate and Check In Real Time | verifyemailaddress.io - Mozilla Firefox". The main content area is titled "Welcome to the home of our free apps site." It features a "Verify Email Address In Real-Time" form where the user has entered "asfasfsafadfasf@gmail.com" and clicked the "GO" button. The results table shows two entries, both of which are labeled "Bad" under the "Result" column. The "Related Tools" section includes links to "Disposable Email Address Checker", "Domain Age Checker", and "WHOIS". The "Articles" section includes a link to "Detailed Guide On How To Do Mailbox Pinging". The footer of the page includes a cookie consent notice and the text "OpenDir.cloud".

- It verifies if an email is real or not:

The screenshot shows a Mozilla Firefox browser window with several tabs open. The active tab is 'Email Address Verifier - Validate and Check In Real Time | verifyemailaddress.io - Mozilla Firefox'. The page itself is titled 'Verify Email Address In Real-Time' and features a search bar where 'email to verify' has been entered. Below the search bar is a message: 'If you like this tool, please share ☺+'. The 'Results' section contains a table with three rows, each representing an email address and its verification status ('Result'): 'info@tcm-sec.com' is 'Ok', while two other entries are 'Bad'. To the right of the main content, there are 'Related Tools' including 'Disposable Email Address Checker' and 'Domain Age Checker', and a section for 'Articles' with a link to 'Detailed Guide On How To Do Mailbox Pinging'.

- Same thing for this website:

The screenshot shows a Mozilla Firefox browser window with several tabs open. The active tab is 'Verifying the Email - Email Checker - Mozilla Firefox'. The page title is 'Checking Email : asfasasffas@gmail.com'. Below the title, it says 'A simple tool to check whether an email address exists.' There is a form with an 'Email Address' input field containing 'asfasasffas@gmail.com' and a 'Check' button. A large red box highlights the word 'BAD' followed by the text 'The mailbox doesn't exist.' At the bottom of the page, there is a section about the 'Premium Plan' and another about 'How do we verify an email ?' which lists several steps. A note at the very bottom states 'Note : We do not store any email address you submit on this website.'

- We can also confirm an email exists, if we try to log in and they say "welcome" and then asks us to type the password...
